US Army Corps of Engineers  
Washington, DC 20314

EM 1110-3-131

Engineer Manual  
No. 1110-3-131

9 April 1984

Engineering and Design  
FLEXIBLE PAVEMENTS FOR ROADS,  
STREETS, WALKS, AND OPEN STORAGE AREAS  
Mobilization Construction

	<u>Paragraph</u>	<u>Page</u>
<b>CHAPTER 1. INTRODUCTION</b>		
Purpose and scope. . . . .	1-1	1-1
Flexible pavement structure. . . . .	1-2	1-1
Soil classification and soil and pavement tests . . . . .	1-3	1-1
Explorations and investigations of sources of supply. . . . .	1-4	1-1
<b>CHAPTER 2. SELECT MATERIALS, SUBGRADE, AND SUBBASE COURSES</b>		
Materials . . . . .	2-1	2-1
Grade line . . . . .	2-2	2-1
Compaction of select materials, subgrade, and subbases . . . . .	2-3	2-1
Subgrade compaction, special cases. . . . .	2-4	2-1
Selection of design CBR for select materials, subgrade, and subbases . . . . .	2-5	2-1
Stabilization or modification. . .	2-6	2-2
<b>CHAPTER 3. BASE COURSE</b>		
General. . . . .	3-1	3-1
Base course compaction . . . . .	3-2	3-1
Design CBR of base course. . . . .	3-3	3-1
Minimum base course thickness. . .	3-4	3-1
Stabilization or modification. . .	3-5	3-4
<b>CHAPTER 4. PAVEMENTS</b>		
General. . . . .	4-1	4-1
Bitumen. . . . .	4-2	4-1
Aggregates . . . . .	4-3	4-1
Hot-mix bituminous concrete pavements. . . . .	4-4	4-1
Plant-mix cold-laid bituminous pavements. . . . .	4-5	4-2

	<u>Paragraph</u>	<u>Page</u>
Bituminous road mix . . . . .	4-6	4-3
Surface treatments, spray application . . . . .	4-7	4-3
<b>CHAPTER 5. FLEXIBLE PAVEMENT DESIGN</b>		
Design requirements. . . . .	5-1	5-1
Design procedure . . . . .	5-2	5-1
Alternate design procedure . . . .	5-3	5-3
Compaction criteria. . . . .	5-4	5-4
Thickness criteria . . . . .	5-5	5-4
Surface smoothness . . . . .	5-6	5-6
Shoulders and similar areas. . . .	5-7	5-6
Sidewalk construction. . . . .	5-8	5-6
Special considerations for open storage areas. . . . .	5-9	5-8
<b>APPENDIX A.</b> PLANT-MIX COLD-LAID BITUMINOUS PAVEMENTS, DESIGN AND CONTROL		A-1
<b>APPENDIX B.</b> DESIGN EXAMPLES		B-1
<b>APPENDIX C.</b> REFERENCES		C-1

#### LIST OF FIGURES

- Figure 1-1. Typical flexible pavement structure.  
 3-1. Depth of compaction for select materials and subgrades of conventional flexible pavements.  
 5-1. Thickness design requirements.  
 5-2. Equivalency factors for soils stabilized with cement, lime, or cement and lime mixed with fly ash.  
 A-1. Sieve analysis.  
 A-2. Specific gravity of bituminous mix components.  
 A-3. Types of paving mixture deficiencies and probable causes.  
 B-1. Design example, Class B street Category IV, loading design index 5.

#### LIST OF TABLES

- Table 2-1. California bearing ratio.  
 3-1. Minimum thickness of pavement and base for conventional pavements.  
 5-1. Design traffic.  
 5-2. Thickness criteria.

- A-1. Aggregate gradations for plant-mix cold-laid bituminous pavements.
- A-2. Selection of bitumen.
- A-3. Optimum bitumen content.
- A-4. Mixing temperatures.
- B-1. CBR design values.
- B-2. Material types and design values.
